FOR IMMEDIATE RELEASE:

US AVIATION SIGNS WITH PRATT & WHITNEY TO INSTALL TURBINE TRACKER SYSTEM

Denton, TX – Pratt & Whitney Engine Services has issued a dealer and installation agreement to US Aviation allowing them to install P&Ws Turbine Tracker System. The system operates like the black box on an airliner, monitoring all engine activity. It can be expanded to keep track of any airframe setting changes.

The hardware and software program provides aircraft owners/operators with critical aircraft performance data used to reduce maintenance and operating costs. US Aviation is the second facility in the DFW area favored with an installation authorization.

"We're pleased to expand our maintenance operations in this direction," said Jeff Soules, Senior Vice President at US Aviation. "It's going to bring in a significant amount of aircraft that need to have this equipment installed." To accommodate the anticipated increase in maintenance activity, US Aviation Maintenance is adding personnel and opening the doors seven days a week: Monday thru Friday 7:00 am to midnight, Saturday and Sunday from 7:00 am to 6:00 pm.

For more information, contact Jeff Soules at 940.383.2484 or visit
